

My Custom CSS

Here's the code I used for my setup. Feel free to use and modify this for your setup.

```
@media (min-width: 0px) {  
  .WeatherWidget {  
    visibility: visible;  
  }  
  body {  
    background: url(uploads/cool-4k-wallpaper-10.jpg);  
    background-size: cover;  
    background-repeat: no-repeat;  
    background-attachment: fixed;  
  }  
  .BookmarkCard_BookmarkCard__1GmHc, .AppGrid_AppGrid__33iLW {  
    margin: 20px;  
    background-color: rgba(0, 0, 0, .5);  
    padding: 20px;  
  }  
  .AppCard_AppCard__1V2_0 {  
    padding: 4px !important;  
    border-radius: 4px;  
    transition: all .1s;  
  }  
  .AppCard_AppCard__1V2_0: hover {  
    background: rgba(0, 0, 0, 1) !important;  
  }  
}
```

Line 6 (the background URL line) has been modified to work for local access AND domain name access.

Revision #2
