

KasmWeb Cli

```
sudo docker run --rm -it --shm-size=512m -p 6901:6901 -e VNC_PW=password kasmweb/image:tag
```

Change 'image:tag' to the appropriate KasmWeb Image. Also change the 6901:6901 as necessary (6902:6901 for example)

The container is now accessible via a browser : <https://IP:6901> (or whatever port you setup for the container.)

The https is required.

Login:

User : kasm_user

Password: password (unless you changed the password.)
