

Self-Hosted Imgur Alternative - Picsur

Picsur is an easy to use, selfhostable image sharing service like Imgur with built in converting

Right now this software is still in beta, and many things are still missing, or will be changed in the future. But it does function, so feel free to give it a try.

It feels like a hybrid between Imgur and Pastebin.

Github: <https://github.com/rubikscraft/Picsur>

Here is the docker-compose I used in the video:

```
version: '3'
services:
  picsur:
    image: ghcr.io/rubikscraft/picsur:latest
    container_name: picsur
    ports:
      - '8080:8080'
    environment:
      # PICSUR_HOST: '0.0.0.0'
      PICSUR_PORT: 8080

      PICSUR_DB_HOST: picsur_postgres
      PICSUR_DB_PORT: 5432
      PICSUR_DB_USERNAME: picsur
      PICSUR_DB_PASSWORD: picsur
      PICSUR_DB_DATABASE: picsur

      PICSUR_ADMIN_PASSWORD: picsur

      PICSUR_JWT_SECRET: 85ws9zcHDcL9gyLJc7NmmJhVwW7iV3Gf
      PICSUR_JWT_EXPIRY: 1d
```

```
PICSUR_MAX_FILE_SIZE: 128000000
PICSUR_STATIC_FRONTEND_ROOT: "/picsur/frontend/dist"
restart: unless-stopped
picsur_postgres:
  image: postgres:14-alpine
  container_name: picsur_postgres
  environment:
    POSTGRES_DB: picsur
    POSTGRES_PASSWORD: picsur
    POSTGRES_USER: picsur
  restart: unless-stopped
  volumes:
    - picsur-data:/var/lib/postgresql/data
volumes:
  picsur-data:
```

Of course, you can modify the volume to mount it wherever you'd like.
